

Petra Universal Sealer & Conditioner

PN 5002 (12oz) Specification Sheet

Product Description:

Petra Transmission Conditioner and Sealer is manufactured to create an additional lubrication and leak prevention benefit for transmissions being utilized under normal and severe driving conditions. This product is safe and effective in the use of all transmissions and with all SLF Automatic Transmission Fluids. When ATF breaks down, the fluid is less capable of lubricating seals and gaskets, as they become dry and brittle leaks develop and fluid loss occurs. Keeping the fluid effective under extreme heat and friction sometimes requires rejuvenating fluids that were left behind in the torque converter if a pan drain was performed.

Advantages & Uses:

- This product is safe to use with all OEM Transmissions
- Helps transmission fluid maintain lubrication properties for the recommended period of use by reducing the amount of contaminants in the transmission system at time of service
- Helps prevent ongoing build up, varnish and other fluid breakdown related issues that can costly repairs such as difficulty shifting and poor acceleration or even eventual transmission failure
- Helps extend the life of the transmission by preventing issues related to worn and depleted ATF

Features:

- Red to light yellow in color
- Easy pour in application
- Contains no alcohol or water
- Will not degrade any mechanical parts
- Reduces leaks due to dry gaskets and seals
- Protects transmission life
